

THEORY OF OPERATION

VITAL RAIL NETWORK

EXTERNAL NETWORKS

Waterfall Unidirectional Security Gateways replace firewalls in OT network environments, **providing absolute protection to critical control systems from attacks emanating from external, less-trusted networks**. Waterfall Gateways contain both hardware and software components. The gateway hardware is physically able to transmit information in only one direction – out of the OCC network to enterprise and Internet networks. The gateway software replicates servers and emulates devices. External users and applications use the replica systems normally and bi-directionally.

Waterfall products enable deep visibility into operations data and operations networks for enterprise users and systems, as well as for Internet-based websites, applications and cloud service providers. With Waterfall products deployed, such visibility is safe from attacks originating on these external networks because of the physically unidirectional nature of the products. Waterfall Unidirectional Gateways and related products provide safe access to Operations Control Center data, without providing access to OCC systems.

The Operation Control Center hosts vital, safety-critical networks, including energy systems, train safety and signaling networks. While these vital networks might once have been closed networks, modern digitization and efficiency initiatives demand new connectivity and data sharing capabilities. Control Systems standards, such as the IEC62443 or the upcoming European TS50701 recommend Unidirectional gateways for interconnecting critical networks to external networks.

UNIDIRECTIONAL SECURITY GATEWAYS BENEFITS:

- » Enable safe, real-time reporting of locomotive location, track and other operational status to business management, track technicians and the public, without putting safe operations at risk
- » Eliminates risk to reliability, worker safety and public safety due to external cyber attacks
- » Enables safe connectivity with cloud-based security operations and other service providers
- » Enables compliance with even the strongest railway and industrial cybersecurity regulations, standards and guidance

ABOUT WATERFALL SECURITY SOLUTIONS

Waterfall Security Solutions is the global leader in industrial cybersecurity technology. Waterfall products, based on its innovative unidirectional security gateway technology, represent an evolutionary alternative to firewalls. The company's expanding portfolio of customers includes national infrastructures, power plants, nuclear plants, offshore oil and gas facilities, rail transport, refineries, manufacturing plants, utility companies, and many more. Deployed throughout North America, Europe, the Middle East and Asia, Waterfall products support the widest range of leading industrial remote monitoring platforms, applications, databases and protocols in the market. Please contact: info@waterfall-security.com

Waterfall's products are covered by U.S. Patents 8,223,205, 7,649,452, and by other pending patent applications in the US and other countries. "Waterfall", the Waterfall Logo, "Stronger than Firewalls", "In Logs We Trust", "Unidirectional CloudConnect", and "CloudConnect, and "One Way to Connect" are trademarks of Waterfall Security Solutions Ltd.
