

WATERFALL FOR IP VIDEO & AUDIO

SECURE IP VIDEO SURVEILLANCE CAMERA STREAMING

A wide range of industries, from energy companies to transport authorities, use video surveillance to safeguard critical assets, monitor the condition of remote equipment, and ensure human safety. Video cameras are, however, notoriously vulnerable to attacks that can endanger important facilities, with attacks compromising both the cameras themselves and the networks to which the cameras are connected. Connecting to cameras directly through firewalls is a problem, since all connections through firewalls introduce attack opportunities.

The Waterfall for IP Video & Audio Connector enables safe, faithful, and continuous IP video and audio streaming without introducing risks of attack. By deploying the Waterfall for IP Video & Audio Connector, business eliminate the risk of remote cyberattacks on their surveillance systems and connected networks, while leveraging high quality video streams to ensure the physical safety of people, sites and assets.

Waterfall for IP Video & Audio is simple to install, with user-friendly, web-based configuration and monitoring tools. Comprehensive diagnostics include real-time alarms that alert the user of fault conditions via Syslog, Windows logs, email, SNMP traps, log files, and Waterfall's monitoring console.

BENEFITS OF USING WATERFALL FOR IP VIDEO & AUDIO

Secure streaming of IP Video and Audio

Simple deployment – the connector runs entirely in the Unidirectional Gateway with a simple web user interface

Eliminates remote-control cyber attacks and online malware propagation

Facilitates compliance with NERC CIP, NIST 800-82, ANSSI, IEC 62443 and more

Seamless integration with surveillance systems

Power

Pipelines

Rail

Water

Facilities

Manufacturing

WATERFALL FOR IP VIDEO & AUDIO

IP video surveillance systems are used widely to secure facilities and sensitive areas, deter crime and enable fast incident response. Sending video from sources in sensitive networks to consumers in other networks through a firewall is a problem security-wise, as is sending video from external networks into sensitive networks. In both cases, firewalls can be compromised by attacks ranging from the simple – password guessing, to the sophisticated – hijacking sessions and disguising attacks as authorized communications.

Waterfall's solution for IP Video & Audio enables secure operation of surveillance networks while eliminating the risk of remote command and control, malware and other attacks on source or destination networks. Waterfall's Unidirectional Security Gateway hardware deployed to send video feeds between sensitive and external networks are physically incapable of supporting modern, targeted command-and-control type communications. The unidirectional hardware is not physically able to support the bi-directional communications that modern ransomware and other targeted attacks use. The Waterfall for IP Video & Audio Connector provides seamless transfer of video data across a surveillance system spread across remote locations and into the organizational network, while ensuring the network security on all these levels.

FULLY- FEATURED & ROBUST SUPPORT:

- » Secure monitoring and operating video surveillance systems from administrative networks
- » Supports a wide range of cameras from any surveillance system vendor
- » 1-10 Gbps throughput standard
- » Built-in data inspection capability
- » Supports RTP, RTSP, and UDP protocols streams

ABOUT WATERFALL

Waterfall Security Solutions' unbreachable OT cybersecurity technologies keep the world running. For more than 15 years, the most important industries and infrastructure have trusted Waterfall to guarantee safe, secure, and reliable operations. The company's growing list of global customers includes national infrastructures, power plants, nuclear generators, onshore and offshore oil and gas facilities, refineries, manufacturing plants, utility companies, and more. Waterfall's patented Unidirectional Gateways and other solutions combine the benefits of impenetrable hardware with unlimited software-based connectivity, enabling 100% safe visibility into industrial operations and automation systems.

Waterfall's products are covered by U.S. Patents 7,649,452, 8,223,205, and by other pending patent applications in the US and other countries. "Waterfall", the Waterfall Logo, "Stronger than Firewalls", "In Logs We Trust", "Unidirectional CloudConnect", and "CloudConnect, and "One Way to Connect" are trademarks of Waterfall Security Solutions Ltd.
