

WATERFALL FOR LOCAL FOLDER

ABSOLUTE PROTECTION FOR LOCAL FOLDER FILE TRANSFERS

Industrial enterprises rely on routine file transfers from OT to IT networks. Many sites routinely transfer logs, custom reports, debugging information and configuration backups to IT networks. However, such transfers through firewalls introduce unacceptable risk to OT control system networks.

The Waterfall for Local Folder connector enables businesses to safely leverage operations data throughout their enterprises without risk. The local folder connector enables seamless and safe IT/OT integration. By deploying Waterfall Unidirectional Gateway technology with local folder connectors, industrial enterprises eliminate the risk of remote cyberattacks entering operations networks, while enabling seamless access to critical operations data for improved efficiencies. In addition, convenient unidirectional file transfers from OT to IT networks dramatically reduce the need for removable media and reduce the serious risks associated with such media use.

Waterfall local folder connectors are simple to install, with user-friendly configuration and monitoring tools. Comprehensive diagnostics include real-time alarms that alert the user of fault conditions via Syslog, Windows logs, email, SNMP traps, log files and Waterfall's monitoring console.

BENEFITS OF USING WATERFALL FOR FILE TRANSFER

Secure, real-time unidirectional file transfers to enterprise networks

Simple deployment – connector runs entirely in the Unidirectional Gateway with simple web user interface

Facilitates compliance with NERC CIP, NIST 800-82, ANSSI, IEC 62443 and more

Unlimited sources and folder tree depths, supporting all file types and sizes

Dramatically reduces need for removable media

Power

Pipelines

Rail

Water

WATERFALL FOR LOCAL FOLDER FILE TRANSFER

Waterfall for local folder connectors enable safe file transfers from OT to IT networks, securing operations and industrial networks against cyber threats from enterprise networks. On operations networks, Waterfall local folder software connectors generally act as file transfer clients, pulling files from the operations network and pushing them to machines on IT networks. Alternately, local folder connectors can also act as a file server on either or both of OT or IT networks, so that end users can drag and drop files into and out of defined folders or sub-folders. Waterfall's sophisticated file filtering ensures that only approved file types with set characteristics are made available on enterprise networks. A configurable operations archive can save copies of all transferred files for a pre-determined period of time.

The unidirectional local folder file transfer process is transparent to users on enterprise networks. Waterfall local folder connectors enable files to be transferred manually or automatically and distributed throughout IT network destinations as needed. Waterfall's Unidirectional Gateway technology coupled with local folder connectors provide seamless and safe IT/OT integration, protecting safe and reliable physical operations with patented, hardware-enforced unidirectional technologies.

FULLY- FEATURED & ROBUST SUPPORT

- » Safe, reliable and comprehensive file transfer support
- » Support for file tree mirroring and individual file transfers
- » Filters: file size, file names, file types & regular expressions
- » 1 Gbps standard throughput & high availability options
- » Sophisticated controls over file transfer sources, destinations, schedules and modes
- » Available with the WF-500
- » Compatible with Windows, Linux and Unix clients & servers

ABOUT WATERFALL

Waterfall Security Solutions' unbreachable OT cybersecurity technologies keep the world running. For more than 15 years, the most important industries and infrastructure have trusted Waterfall to guarantee safe, secure, and reliable operations. The company's growing list of global customers includes national infrastructures, power plants, nuclear generators, onshore and offshore oil and gas facilities, refineries, manufacturing plants, utility companies, and more. Waterfall's patented Unidirectional Gateways and other solutions combine the benefits of impenetrable hardware with unlimited software-based connectivity, enabling 100% safe visibility into industrial operations and automation systems.

Waterfall's products are covered by U.S. Patents 7,649,452, 8,223,205, and by other pending patent applications in the US and other countries. "Waterfall", the Waterfall Logo, "Stronger than Firewalls", "In Logs We Trust", "Unidirectional CloudConnect", and "CloudConnect, and "One Way to Connect" are trademarks of Waterfall Security Solutions Ltd.
