

WATERFALL FOR AVEVA PI

SECURE MONITORING OF AVEVA PI SYSTEMS FOR ENTERPRISE USE

Since 2009, Waterfall Security has been a trusted partner of AVEVA (formerly OSIsoft), securing the IT/OT connection in PI deployments for many mutual customers worldwide. AVEVA, a world leader in operational intelligence with its flagship PI System, enables businesses to capture and leverage sensor-based data across enterprises for improved efficiency.

Waterfall's solution suite for the AVEVA PI System comprehensively addresses:

- Safe integration of operational technology (OT) and information technology (IT) networks
- Native protocol support and access to AVEVA PI data sets and analytics capabilities
- Safe and seamless connectivity to the AVEVA Data Hub

By deploying Waterfall for AVEVA PI System®, businesses eliminate the risk of remote cyberattacks entering their industrial control systems while enabling seamless enterprise and cloud access to critical operational data for improved efficiencies.

AVEVA

FEATURES & BENEFITS WATERFALL FOR AVEVA PI

Secure replication for AVEVA PI Data Archive, PI Asset Framework, PI Backfill and PI Data Hub

Elimination of remote-control cyber attacks and online malware propagation

Real-time alarms & diagnostics via Syslog, Windows logs, email, SNMP traps, log files, PI system tags and Waterfall's monitoring console

High-availability options: PI High Availability Collectives, clustered Waterfall gateways and many others

Real-time replication of tags, attributes, events, frames, values & notifications. Optional propagation of tag structure and attribute changes.

Simple deployment – connector runs entirely in the Unidirectional Gateway with simple web user interface

Native protocol support for all PI data types: numeric, digital, string and timestamps

Optional aggregation of multiple industrial PI Servers into a single enterprise server. Complete or selective server replication.

WF FOR AVEVA PI UNIDIRECTIONAL REPLICATION

WATERFALL'S SOLUTION SUITE FOR THE PI SYSTEM

Waterfall Unidirectional Security Gateways support the replication of both the PI Archive and Asset Framework namespaces. Waterfall for AVEVA PI is a native replication, without need for third-party protocol converters or other components running on PI Servers or other systems. Waterfall for AVEVA PI supports many-to-one architectures, PI Collectives, Backfill, events, tags, tag data and tag attribute replication and synchronization, with multiple options for native High Availability.

AVEVA PI SYSTEM

Replicates operational PI Systems in industrial networks to enterprise networks, optionally aggregating multiple plants into a single enterprise historian.

Users interact normally and bi-directionally with replica servers, keeping industrial networks safe from remote cyber attacks.

PI ASSET FRAMEWORK

Replicates PI Asset Framework servers, repositories for asset-centric models, hierarchies, objects, and equipment by using the supported, PI AF API.

The PI AF replicas are automatically synchronized with the original ICS AF servers and provide access to all PI AF data sources. Framework replication of names, contexts; accessible via AF interfaces

PI BACKFILL

Retransmits AVEVA PI System data to replica servers on the IT network to address data gaps.

The Backfill function identifies existing data so that duplicate data does not appear in replica servers.

ABOUT WATERFALL

Waterfall Security Solutions' unbreachable OT cybersecurity technologies keep the world running. For more than 15 years, the most important industries and infrastructure have trusted Waterfall to guarantee safe, secure, and reliable operations. The company's growing list of global customers includes national infrastructures, power plants, nuclear generators, onshore and offshore oil and gas facilities, refineries, manufacturing plants, utility companies, and more. Waterfall's patented Unidirectional Gateways and other solutions combine the benefits of impenetrable hardware with unlimited software-based connectivity, enabling 100% safe visibility into industrial operations and automation systems.

Waterfall's products are covered by U.S. Patents 7,649,452, 8,223,205, and by other pending patent applications in the US and other countries.
