WATERFALL FOR GE HISTORIAN

SECURE MONITORING OF GE HISTORIAN SERVERS

Industrial enterprises frequently need enterprise-wide access to historical data via GE Historian for trending, analysis, optimization and reporting tools. Connecting enterprise networks to industrial GE Historian sources through a firewall, however, is high risk. All connections through firewalls that permit data to leave an industrial system also permit attacks to enter that system.

Waterfall’s solution suite for GE Historian and Archive comprehensively addresses the needs of industrial enterprises to achieve safe integration of operational technology (OT) and information technology (IT) networks, while maximizing access to GE Historian data sets and analytics capabilities. By deploying Waterfall for GE Historian, businesses eliminate the risk of remote cyberattacks entering their industrial control systems while enabling seamless access to critical operational data for improved efficiencies.

BENEFITS OF USING WATERFALL FOR GE HISTORIAN

- Secure replication of GE Historian Servers
- Elimination of remote control cyberattacks and online malware propagation
- Facilitating compliance with NERC CIP, NIST, CFATS, ANSSI, UK DfT and more
- Maximum utilization of all GE Historian features
- Simple deployment, off-the-shelf solution
FULLY-FEATURED & ROBUST SUPPORT:

- Real-time replication of tags, attributes, events, alarms, frames, values and notifications
- Support for numeric, digital, string and timestamp tag types
- Support for all data types
- Automatic replication of GE Historian tag addition, deletion, and other metadata changes
- Complete or selective database replication
- High-availability options
- GE Historian Backfill capabilities for data retransmission
- Fully transparent to GE Historian users.
- Optional aggregation of multiple source GE Historian servers into one replica

Waterfall’s simple installation, configuration and monitoring tools make it easy for GE Historian users. Comprehensive diagnostics include real-time alarms that alert the user of fault conditions via Syslog, Windows logs, email, SNMP traps, log files, and Waterfall’s monitoring console.

<tr>
<th>GE HISTORIAN SYSTEM</th>
<th>GE HISTORIAN ARCHIVE</th>
</tr>
</thead>
<tbody>
<tr>
<td>Replicates operational GE Historian Systems in industrial networks to enterprise networks, optionally aggregating multiple plants into a single enterprise historian. Users interact normally and bi-directionally with replica servers, keeping industrial networks safe from remote cyber attacks.</td>
<td>Retransmits GE Historian data to replica servers on the IT network to address data gaps. The Archive function identifies existing data so that duplicate data does not appear in replica servers in the case of any downtime.</td>
</tr>
</tbody>
</table>

ABOUT WATERFALL SECURITY SOLUTIONS

Waterfall Security Solutions is the global leader in industrial cybersecurity technology. The company’s expanding portfolio of customers includes national infrastructures, power plants, nuclear plants, offshore oil and gas facilities, rail transport, refineries, and many more. Deployed throughout North America, Europe, the Middle East, and Asia, Waterfall products support the widest range of leading industrial remote monitoring platforms, applications, and protocols in the market. Please contact info@waterfall-security.com

Waterfall’s products are covered by U.S. Patents 7,649,462, 6,335,205, and by other pending patent applications in the US and other countries.
